

Filip Wachowiak

I'm young and eager to learn. I specialize in JavaScript but I am not closed to other languages. I love optimizing work with scripts and other tools. I like clean code but I understand the deadlines. I'd be happy to present you my knowledge

EXPERIENCE

Blue Owl Sp. z o.o., Poznań — Web Developer

JULY 2018 - PRESENT

My job was mainly about creating custom WordPress themes, but because of my passion for modern web I managed to improve the development process with Docker (see my projects) and was given an opportunity to rewrite Blue Owl website from scratch with Gatsby (it is not available yet). I decided to leave Blue Owl because I am passionate about Front-end and I want to have more opportunities to work with modern high quality JavaScript.

EDUCATION

Technical School of Communication, Poznań — IT Technician

SEPTEMBER 2017 - PRESENT

I've learned there a lot about networks, foundations of programming, operating systems, databases and websites. Because of many IT enthusiastic classmates I've also learned about neural networks, mobile development and network security. I'll graduate from this school in May 2021.

PERSONAL PROJECTS

Dives — AWS Lambda, Typescript, Apollo Server, DynamoDB

Serverless API with mobile and web expense tracker app. API is currently under development [🔗](#), mobile and web apps are planned.

Worlds Stats — React, Gatsby, Puppeteer

Gatsby page with League of Legends Worlds statistics [🔗](#). Data is fetched by custom web scraper [🔗](#) and then exported as a JSON to generate the webpage.

Wordpress Dockerised — Docker, Bash, Nginx, PHP

Docker-compose file for WordPress, MySQL and PHPMyAdmin with custom theme installation script. Project created to improve the development process in my company. Thanks to my initiative this project significantly reduced compatibility issues when a developer needed to jump into someone else's project or even wanted to kickstart a new project.

Pytatki — Vue, MongoDB, WebSockets, Express, GraphQL

School notes manager web app. I'm not hosting this project anywhere, but it can be run locally [🔗](#). Vue web application communicates with Express, that handles GraphQL API created with Prisma and MongoDB. It uses WebSockets through tiptap to create real time collaborative notes possible. Project was archived because I decided to focus on React and at that moment I lacked time.

SKILLS

JavaScript – advanced
Mostly Vanilla JS and React with Redux and Gatsby, but I know also Vue, Webpack, Express, Apollo, TypeScript and many more

HTML – advanced
Semantic and accessible.

CSS – advanced
I feel comfortable using modern grid and flex box.

AVAILABILITY

Please note, that from **September 2020 to May 2021** I will be available around 20 hours a week because I will be trying to reconcile school with work. Therefore most of my work will happen during evenings (UTC+1/+2) in that period. I will try to be as flexible as it is needed to attend different meetings and there will be no problem communicating with me during school day via text message or email.

LANGUAGES

Polish – native
English – advanced
German – intermediate
Italian – beginner
